superior cleaning & circulation

Fast and Powerful Cleaning

The Xport Drain System efficiently whisks debris away from the bottom of pools, spas, overflow basins and fountains. A unique funnel shape compresses and directs debris to the outlet port for faster, more powerful removal of foreign material with less chance for blockage.

The Safer Drain

The Xport Drain System features a dual anti-entrapment design that will prevent a dangerous vacuum from forming if the primary drain is ever covered or blocked. A unique cover design greatly decreases the likelihood that a swimmer's body can become entrapped. Additionally, the large open spaces in the primary cover, smooth sweep design and 2 1/2" plumbing help prevent hair entanglement, making the pool a safer environment for your family to enjoy.

Improved Circulation

Ensure uniform circulation of your pool water by installing the X-port Drain System in conjunction with strategically placed pool returns or in-floor nozzles. The more controlled distribution of water will ensure that you save on heating and chemical costs, providing you with sparkling clear pool water all year round.
